1. HTML
2. CSS
3. Bootstrap
4. JavaScript
5. jQuery
6. React
7. MongoDB
8. C++
9. Core Java
10. Data Structure

Academic Project

Project Name: Business Application

Technology used: HTML, CSS, Bootstrap, JavaScript

Short Description: Book Store has premade website designs for book library, reading, and book authors. A simple design with a retro look is followed in this template. If you are not into fancy designs, this template is worth a look. Though the design looks a tad older, practicality is good in this template. For example, a separate section with the page-turning effect is given for you to preview the book.

Project Name: Covid-19 Dashboard

Roles Performed: Used CSS to make the responsive page.

Make responsive pages for all screen type.

Use bootstrap classes for design the component.

Technology used: HTML5, CSS3, Bootstrap, JavaScript

Short Description: Covid-19 dashboard provide the information about all covid active, death, recovered confirmed cases. There are two parts. First is search by pin and second is search by state. Data shows the data related to all cases in the table form region wise.

Participation

Digital Literacy Organized by Patna NIT
